Describing Meaning - Week 12: Modality

Dr. Thomas Stephen

School of Linguistic, Speech and Communication Sciences
Trinity College Dublin

Semester 2 2026

What modality is

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
    - *Emma is at home.*

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
  - *Emma is at home.*
  - *Emma might be at home.*

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
  - *Emma is at home.*
  - *Emma might be at home.*
  - *Emma must be at home.*

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
    - *Emma is at home.*
    - *Emma might be at home.*
    - *Emma must be at home.*
    - *Emma should be at home by now.*

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
    - *Emma is at home.*
    - *Emma might be at home.*
    - *Emma must be at home.*
    - *Emma should be at home by now.*
- We care in particular about:
    - **modal auxiliaries**: *may, might, must, should, can,*

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
  - *Emma is at home.*
  - *Emma might be at home.*
  - *Emma must be at home.*
  - *Emma should be at home by now.*
- We care in particular about:
  - **modal auxiliaries**: *may, might, must, should, can,*
  - **modal adverbs**: *maybe, perhaps, possibly, probably,*

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
  - *Emma is at home.*
  - *Emma might be at home.*
  - *Emma must be at home.*
  - *Emma should be at home by now.*
- We care in particular about:
  - **modal auxiliaries**: *may, might, must, should, can*,
  - **modal adverbs**: *maybe, perhaps, possibly, probably*,
  - **propositional attitude verbs**: *think, believe, know, want, hope*.

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
  - *Emma is at home.*
  - *Emma might be at home.*
  - *Emma must be at home.*
  - *Emma should be at home by now.*
- We care in particular about:
  - **modal auxiliaries**: *may, might, must, should, can*,
  - **modal adverbs**: *maybe, perhaps, possibly, probably*,
  - **propositional attitude verbs**: *think, believe, know, want, hope*.
- In many languages, but not straightforwardly in English, grammatical **mood** is also tied to modality:
  - **indicative**,

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
  - *Emma is at home.*
  - *Emma might be at home.*
  - *Emma must be at home.*
  - *Emma should be at home by now.*
- We care in particular about:
  - **modal auxiliaries**: *may, might, must, should, can*,
  - **modal adverbs**: *maybe, perhaps, possibly, probably*,
  - **propositional attitude verbs**: *think, believe, know, want, hope*.
- In many languages, but not straightforwardly in English, grammatical **mood** is also tied to modality:
  - **indicative**,
  - **subjunctive**,

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
  - *Emma is at home.*
  - *Emma might be at home.*
  - *Emma must be at home.*
  - *Emma should be at home by now.*
- We care in particular about:
  - **modal auxiliaries**: *may, might, must, should, can*,
  - **modal adverbs**: *maybe, perhaps, possibly, probably*,
  - **propositional attitude verbs**: *think, believe, know, want, hope*.
- In many languages, but not straightforwardly in English, grammatical **mood** is also tied to modality:
  - **indicative**,
  - **subjunctive**,
  - **evidential** categories, etc.

What modality is

- **Modality** concerns possibility, necessity, obligation, inference, desire, and related notions.
- Compare:
  - *Emma is at home.*
  - *Emma might be at home.*
  - *Emma must be at home.*
  - *Emma should be at home by now.*
- We care in particular about:
  - **modal auxiliaries**: *may, might, must, should, can*,
  - **modal adverbs**: *maybe, perhaps, possibly, probably*,
  - **propositional attitude verbs**: *think, believe, know, want, hope*.
- In many languages, but not straightforwardly in English, grammatical **mood** is also tied to modality:
  - **indicative**,
  - **subjunctive**,
  - **evidential** categories, etc.

Modal expressions

- Non-Modal:
  - *Daniel is a secret agent.*

Modal expressions

- Non-Modal:
  - *Daniel is a secret agent.*
- Modal auxiliary:
  - *Daniel might be a secret agent.*

Modal expressions

- Non-Modal:
  - *Daniel is a secret agent.*
- Modal auxiliary:
  - *Daniel might be a secret agent.*
- Modal adverb:
  - *Maybe Daniel is a secret agent.*

Modal expressions

- Non-Modal:
  - *Daniel is a secret agent.*
- Modal auxiliary:
  - *Daniel might be a secret agent.*
- Modal adverb:
  - *Maybe Daniel is a secret agent.*
- Propositional attitude verb:
  - *Hammurabi believes that Daniel is a secret agent.*

Modal expressions

- Non-Modal:
  - *Daniel is a secret agent.*
- Modal auxiliary:
  - *Daniel might be a secret agent.*
- Modal adverb:
  - *Maybe Daniel is a secret agent.*
- Propositional attitude verb:
  - *Hammurabi believes that Daniel is a secret agent.*
- All of these can shift us away from plain actual-world truth conditions.

Modal expressions

- Non-Modal:
  - *Daniel is a secret agent.*
- Modal auxiliary:
  - *Daniel might be a secret agent.*
- Modal adverb:
  - *Maybe Daniel is a secret agent.*
- Propositional attitude verb:
  - *Hammurabi believes that Daniel is a secret agent.*
- All of these can shift us away from plain actual-world truth conditions.

Intensionality

Extension and intension

- We have already met the difference between **extension** and **intension** in set notation.

Extension and intension

- We have already met the difference between **extension** and **intension** in set notation.
- An **extensional** way of specifying a set lists its members:

$$\{2, 4, 6, 8\}$$

Extension and intension

- We have already met the difference between **extension** and **intension** in set notation.
- An **extensional** way of specifying a set lists its members:

$$\{2, 4, 6, 8\}$$

- An **intensional** way specifies a condition on membership:

$$\{x : x \text{ is an even number between 1 and 9}\}$$

Extension and intension

- We have already met the difference between **extension** and **intension** in set notation.
- An **extensional** way of specifying a set lists its members:

$$\{2, 4, 6, 8\}$$

- An **intensional** way specifies a condition on membership:

$$\{x : x \text{ is an even number between 1 and 9}\}$$

- In semantics:
  - **extension** = what an expression picks out at a world,

Extension and intension

- We have already met the difference between **extension** and **intension** in set notation.
- An **extensional** way of specifying a set lists its members:

$$\{2, 4, 6, 8\}$$

- An **intensional** way specifies a condition on membership:

$$\{x : x \text{ is an even number between 1 and 9}\}$$

- In semantics:
  - **extension** = what an expression picks out at a world,
  - **intension** = how that value varies across worlds.

Extension and intension

- We have already met the difference between **extension** and **intension** in set notation.
- An **extensional** way of specifying a set lists its members:

$$\{2, 4, 6, 8\}$$

- An **intensional** way specifies a condition on membership:

$$\{x : x \text{ is an even number between 1 and 9}\}$$

- In semantics:
  - **extension** = what an expression picks out at a world,
  - **intension** = how that value varies across worlds.

Frege and opacity

- *the Morning Star* = *the Evening Star*

Frege and opacity

- *the Morning Star* = *the Evening Star* = Venus

Frege and opacity

- *the Morning Star* = *the Evening Star* = Venus

- Since the Morning Star is the Evening Star, any properties the Morning Star has, the Evening Star also has.

Frege and opacity

- *the Morning Star* = *the Evening Star* = Venus
- Since the Morning Star is the Evening Star, any properties the Morning Star has, the Evening Star also has.
  - *The Morning Star is a planet.*

Frege and opacity

- *the Morning Star* = *the Evening Star* = Venus

- Since the Morning Star is the Evening Star, any properties the Morning Star has, the Evening Star also has.
  - *The Morning Star is a planet.*
  - *The Evening Star is a planet.*

Frege and opacity

- *the Morning Star* = *the Evening Star* = Venus
- Since the Morning Star is the Evening Star, any properties the Morning Star has, the Evening Star also has.
  - *The Morning Star is a planet.*
  - *The Evening Star is a planet.*
  - *The Morning Star is visible at dawn.*

Frege and opacity

- *the Morning Star* = *the Evening Star* = Venus
- Since the Morning Star is the Evening Star, any properties the Morning Star has, the Evening Star also has.
  - *The Morning Star is a planet.*
  - *The Evening Star is a planet.*
  - *The Morning Star is visible at dawn.*
  - *The Evening Star is visible at dawn.*

Frege and opacity

- *the Morning Star* = *the Evening Star* = Venus
- Since the Morning Star is the Evening Star, any properties the Morning Star has, the Evening Star also has.
  - *The Morning Star is a planet.*
  - *The Evening Star is a planet.*
  - *The Morning Star is visible at dawn.*
  - *The Evening Star is visible at dawn.*
- But now compare:
  - *Hammurabi believes that the Morning Star is visible at dawn.*

Frege and opacity

  - *the Morning Star* = *the Evening Star* = Venus
- Since the Morning Star is the Evening Star, any properties the Morning Star has, the Evening Star also has.
  - *The Morning Star is a planet.*
  - *The Evening Star is a planet.*
  - *The Morning Star is visible at dawn.*
  - *The Evening Star is visible at dawn.*
- But now compare:
  - *Hammurabi believes that the Morning Star is visible at dawn.*
  - *Hammurabi believes that the Evening Star is visible at dawn.*

Frege and opacity

- *the Morning Star* = *the Evening Star* = Venus
- Since the Morning Star is the Evening Star, any properties the Morning Star has, the Evening Star also has.
  - *The Morning Star is a planet.*
  - *The Evening Star is a planet.*
  - *The Morning Star is visible at dawn.*
  - *The Evening Star is visible at dawn.*
- But now compare:
  - *Hammurabi believes that the Morning Star is visible at dawn.*
  - *Hammurabi believes that the Evening Star is visible at dawn.*

Young Pope

In 1960, the Pope was 5 years old.

Fictional Discourse

Sherlock Holmes lives at 221B Baker Street.

Intensional Objects

- *The top card in the deck of cards is the Ace of Spades.*

Intensional Objects

- *The top card in the deck of cards is the Ace of Spades.*
- *To begin the game, draw the top card in the deck.*

Intensional Objects

- *The top card in the deck of cards is the Ace of Spades.*
- *To begin the game, draw the top card in the deck.*
    - *To begin the game, draw the Ace of Spades.*

Intensional Objects

- *The top card in the deck of cards is the Ace of Spades.*
- *To begin the game, draw the top card in the deck.*
    - *To begin the game, draw the Ace of Spades.*

Modality

Modality

Modality

- Modality concerns possibilities, necessities, obligations, inferences, goals, and related notions.

Modality

- Modality concerns possibilities, necessities, obligations, inferences, goals, and related notions.
- Compare:
  - *All pedestrians obey the signal.*

Modality

- Modality concerns possibilities, necessities, obligations, inferences, goals, and related notions.
- Compare:
  - *All pedestrians obey the signal.*
  - *All pedestrians must obey the signal.*

Modality

- Modality concerns possibilities, necessities, obligations, inferences, goals, and related notions.
- Compare:
    - *All pedestrians obey the signal.*
    - *All pedestrians must obey the signal.*
- The first sentence is about what actually happens.

Modality

- Modality concerns possibilities, necessities, obligations, inferences, goals, and related notions.
- Compare:
    - *All pedestrians obey the signal.*
    - *All pedestrians must obey the signal.*
- The first sentence is about what actually happens.
- The second is about what happens in all relevant alternatives.

Modality

- Modality concerns possibilities, necessities, obligations, inferences, goals, and related notions.
- Compare:
  - *All pedestrians obey the signal.*
  - *All pedestrians must obey the signal.*
- The first sentence is about what actually happens.
- The second is about what happens in all relevant alternatives.

Modal flavour

Modal flavour

- One dimension of modal meaning is **flavour**.

Modal flavour

- One dimension of modal meaning is **flavour**.
- Flavour tells us **which kind of alternatives** are relevant.

Modal flavour

- One dimension of modal meaning is **flavour**.
- Flavour tells us **which kind of alternatives** are relevant.
- Common flavours include:
    - **epistemic**: what is compatible with what is known, inferred, or believed,

Modal flavour

- One dimension of modal meaning is **flavour**.
- Flavour tells us **which kind of alternatives** are relevant.
- Common flavours include:
  - **epistemic**: what is compatible with what is known, inferred, or believed,
  - **deontic**: what is compatible with rules, duties, or permissions,

Modal flavour

- One dimension of modal meaning is **flavour**.
- Flavour tells us **which kind of alternatives** are relevant.
- Common flavours include:
  - **epistemic**: what is compatible with what is known, inferred, or believed,
  - **deontic**: what is compatible with rules, duties, or permissions,
  - **circumstantial**: what is compatible with the relevant circumstances,

Modal flavour

- One dimension of modal meaning is **flavour**.
- Flavour tells us **which kind of alternatives** are relevant.
- Common flavours include:
  - **epistemic**: what is compatible with what is known, inferred, or believed,
  - **deontic**: what is compatible with rules, duties, or permissions,
  - **circumstantial**: what is compatible with the relevant circumstances,
  - **bouletic**: what is compatible with desires or wishes,

Modal flavour

- One dimension of modal meaning is **flavour**.
- Flavour tells us **which kind of alternatives** are relevant.
- Common flavours include:
  - **epistemic**: what is compatible with what is known, inferred, or believed,
  - **deontic**: what is compatible with rules, duties, or permissions,
  - **circumstantial**: what is compatible with the relevant circumstances,
  - **bouletic**: what is compatible with desires or wishes,
  - **teleological**: what is required to achieve some goal.

Modal flavour

- One dimension of modal meaning is **flavour**.
- Flavour tells us **which kind of alternatives** are relevant.
- Common flavours include:
  - **epistemic**: what is compatible with what is known, inferred, or believed,
  - **deontic**: what is compatible with rules, duties, or permissions,
  - **circumstantial**: what is compatible with the relevant circumstances,
  - **bouletic**: what is compatible with desires or wishes,
  - **teleological**: what is required to achieve some goal.
- The same English modal can often receive different flavours in different contexts.

Modal flavour

- One dimension of modal meaning is **flavour**.
- Flavour tells us **which kind of alternatives** are relevant.
- Common flavours include:
    - **epistemic**: what is compatible with what is known, inferred, or believed,
    - **deontic**: what is compatible with rules, duties, or permissions,
    - **circumstantial**: what is compatible with the relevant circumstances,
    - **bouletic**: what is compatible with desires or wishes,
    - **teleological**: what is required to achieve some goal.
- The same English modal can often receive different flavours in different contexts.

Epistemic flavour

- **Epistemic** readings are about what follows from evidence, knowledge, or belief.

Epistemic flavour

- **Epistemic** readings are about what follows from evidence, knowledge, or belief.
- For example:
  - *She must be on stage.*

Epistemic flavour

- **Epistemic** readings are about what follows from evidence, knowledge, or belief.
- For example:
  - *She must be on stage.*
  - *They might be at home.*

Epistemic flavour

- **Epistemic** readings are about what follows from evidence, knowledge, or belief.
- For example:
  - *She must be on stage.*
  - *They might be at home.*
  - *John should be home by now.*

Epistemic flavour

- **Epistemic** readings are about what follows from evidence, knowledge, or belief.
- For example:
  - *She must be on stage.*
  - *They might be at home.*
  - *John should be home by now.*
- The modal expresses a conclusion about what is likely or necessary given the available information.

Epistemic flavour

- **Epistemic** readings are about what follows from evidence, knowledge, or belief.
- For example:
  - *She must be on stage.*
  - *They might be at home.*
  - *John should be home by now.*
- The modal expresses a conclusion about what is likely or necessary given the available information.

Deontic flavour

- **Deontic** readings are about rules, norms, obligations, and permissions.

Deontic flavour

- **Deontic** readings are about rules, norms, obligations, and permissions.
- For example:
  - *You must submit the essay by Friday.*

Deontic flavour

- **Deontic** readings are about rules, norms, obligations, and permissions.
- For example:
    - *You must submit the essay by Friday.*
    - *Students may use a dictionary in the exam.*

Deontic flavour

- **Deontic** readings are about rules, norms, obligations, and permissions.
- For example:
  - *You must submit the essay by Friday.*
  - *Students may use a dictionary in the exam.*
  - *Visitors should sign in at reception.*

Deontic flavour

- **Deontic** readings are about rules, norms, obligations, and permissions.
- For example:
  - *You must submit the essay by Friday.*
  - *Students may use a dictionary in the exam.*
  - *Visitors should sign in at reception.*
- Here the modal does not describe evidence or inference.

Deontic flavour

- **Deontic** readings are about rules, norms, obligations, and permissions.
- For example:
    - *You must submit the essay by Friday.*
    - *Students may use a dictionary in the exam.*
    - *Visitors should sign in at reception.*
- Here the modal does not describe evidence or inference.
- It evaluates worlds according to some authority, rule system, or normative standard.

Deontic flavour

- **Deontic** readings are about rules, norms, obligations, and permissions.
- For example:
  - *You must submit the essay by Friday.*
  - *Students may use a dictionary in the exam.*
  - *Visitors should sign in at reception.*
- Here the modal does not describe evidence or inference.
- It evaluates worlds according to some authority, rule system, or normative standard.

Other modal flavours

- **Circumstantial:**
  - *With enough rain, the river can flood the valley.*

Other modal flavours

- **Circumstantial:**
  - *With enough rain, the river can flood the valley.*
  - *Avocado trees can grow there.*

Other modal flavours

- **Circumstantial:**
  - *With enough rain, the river can flood the valley.*
  - *Avocado trees can grow there.*
- **Bouletic:**
  - *I want Emma to win.*

Other modal flavours

- **Circumstantial:**
  - *With enough rain, the river can flood the valley.*
  - *Avocado trees can grow there.*
- **Bouletic:**
  - *I want Emma to win.*
  - *Hannah hopes to travel to Greece.*

Other modal flavours

- **Circumstantial:**
  - *With enough rain, the river can flood the valley.*
  - *Avocado trees can grow there.*
- **Bouletic:**
  - *I want Emma to win.*
  - *Hannah hopes to travel to Greece.*
- **Teleological:**
  - *To catch the train, you must leave now.*

Other modal flavours

- **Circumstantial:**
  - *With enough rain, the river can flood the valley.*
  - *Avocado trees can grow there.*
- **Bouletic:**
  - *I want Emma to win.*
  - *Hannah hopes to travel to Greece.*
- **Teleological:**
  - *To catch the train, you must leave now.*
  - *To beat the boss, you have to destroy the shield first.*

Other modal flavours

- **Circumstantial:**
  - *With enough rain, the river can flood the valley.*
  - *Avocado trees can grow there.*
- **Bouletic:**
  - *I want Emma to win.*
  - *Hannah hopes to travel to Greece.*
- **Teleological:**
  - *To catch the train, you must leave now.*
  - *To beat the boss, you have to destroy the shield first.*
- Different flavours involve different ways of restricting the relevant alternatives.

Other modal flavours

- **Circumstantial:**
  - *With enough rain, the river can flood the valley.*
  - *Avocado trees can grow there.*
- **Bouletic:**
  - *I want Emma to win.*
  - *Hannah hopes to travel to Greece.*
- **Teleological:**
  - *To catch the train, you must leave now.*
  - *To beat the boss, you have to destroy the shield first.*
- Different flavours involve different ways of restricting the relevant alternatives.

Flavour in context

- Some sentences are naturally compatible with more than one flavour.

Flavour in context

- Some sentences are naturally compatible with more than one flavour.
- Try to give both an **epistemic** and a **deontic** reading for:
  - *She must be on stage.*

Flavour in context

- Some sentences are naturally compatible with more than one flavour.
- Try to give both an **epistemic** and a **deontic** reading for:
  - *She must be on stage.*
  - *She should be home by now.*

Flavour in context

- Some sentences are naturally compatible with more than one flavour.
- Try to give both an **epistemic** and a **deontic** reading for:
    - *She must be on stage.*
    - *She should be home by now.*
- Ask yourself:
    - Is the modal interpreted given what we know?

Flavour in context

- Some sentences are naturally compatible with more than one flavour.
- Try to give both an **epistemic** and a **deontic** reading for:
  - *She must be on stage.*
  - *She should be home by now.*
- Ask yourself:
  - Is the modal interpreted given what we know?
  - Or given some rules, duties, or morals?

Flavour in context

- Some sentences are naturally compatible with more than one flavour.
- Try to give both an **epistemic** and a **deontic** reading for:
  - *She must be on stage.*
  - *She should be home by now.*
- Ask yourself:
  - Is the modal interpreted given what we know?
  - Or given some rules, duties, or morals?
- English often leaves this to context.

Flavour in context

- Some sentences are naturally compatible with more than one flavour.
- Try to give both an **epistemic** and a **deontic** reading for:
  - *She must be on stage.*
  - *She should be home by now.*
- Ask yourself:
  - Is the modal interpreted given what we know?
  - Or given some rules, duties, or morals?
- English often leaves this to context.

Modal force

Modal force

Quantificational force

- A second dimension of modal meaning is **force**.

Quantificational force

- A second dimension of modal meaning is **force**.
- This has a useful parallel with nominal quantifiers.

Quantificational force

- A second dimension of modal meaning is **force**.
- This has a useful parallel with nominal quantifiers.
- Compare:
    - *some student left* $\rightsquigarrow$ existential quantification

Quantificational force

- A second dimension of modal meaning is **force**.
- This has a useful parallel with nominal quantifiers.
- Compare:
  - *some student left* $\rightsquigarrow$ existential quantification
  - *every student left* $\rightsquigarrow$ universal quantification

Quantificational force

- A second dimension of modal meaning is **force**.
- This has a useful parallel with nominal quantifiers.
- Compare:
  - *some student left* $\rightsquigarrow$ existential quantification
  - *every student left* $\rightsquigarrow$ universal quantification
- Modals behave similarly, except that they quantify over **possible worlds**.

Quantificational force

- A second dimension of modal meaning is **force**.
- This has a useful parallel with nominal quantifiers.
- Compare:
  - *some student left* $\rightsquigarrow$ existential quantification
  - *every student left* $\rightsquigarrow$ universal quantification
- Modals behave similarly, except that they quantify over **possible worlds**.

Possibility and existential force

- Possibility modals have **existential** force.

Possibility and existential force

- Possibility modals have **existential** force.
-
$$\textit{might } p \quad \rightsquigarrow \quad \exists w' \, [w' \text{ is relevant and } p \text{ is true in } w']$$

Possibility and existential force

- Possibility modals have **existential** force.
- $$\textit{might } p \quad \rightsquigarrow \quad \exists w' \, [w' \text{ is relevant and } p \text{ is true in } w']$$
- Compare:
  - *Some student is absent.*

Possibility and existential force

- Possibility modals have **existential** force.
- $$\textit{might } p \quad \rightsquigarrow \quad \exists w' \, [w' \text{ is relevant and } p \text{ is true in } w']$$
- Compare:
  - *Some student is absent.*
  - *Emma might be absent.*

Possibility and existential force

- Possibility modals have **existential** force.
- $$\textit{might } p \quad \rightsquigarrow \quad \exists w' \, [w' \text{ is relevant and } p \text{ is true in } w']$$
- Compare:
  - *Some student is absent.*
  - *Emma might be absent.*
- The first says there is at least one relevant person.

Possibility and existential force

- Possibility modals have **existential** force.
- $$\textit{might } p \quad \rightsquigarrow \quad \exists w' \, [w' \text{ is relevant and } p \text{ is true in } w']$$
- Compare:
  - *Some student is absent.*
  - *Emma might be absent.*
- The first says there is at least one relevant person.
- The second says there is at least one relevant world in which the proposition is true.

Possibility and existential force

- Possibility modals have **existential** force.
- $$\textit{might } p \quad \rightsquigarrow \quad \exists w' \, [w' \text{ is relevant and } p \text{ is true in } w']$$
- Compare:
  - *Some student is absent.*
  - *Emma might be absent.*
- The first says there is at least one relevant person.
- The second says there is at least one relevant world in which the proposition is true.

Necessity and universal force

- Necessity modals have **universal** force.

Necessity and universal force

- Necessity modals have **universal** force.
- $$\textit{must } p \quad \rightsquigarrow \quad \forall w' \, [w' \text{ is relevant } \rightarrow p \text{ is true in } w']$$

Necessity and universal force

- Necessity modals have **universal** force.
- $$\textit{must } p \quad \rightsquigarrow \quad \forall w' \, [w' \text{ is relevant } \rightarrow p \text{ is true in } w']$$
- Compare:
    - *Every student is absent.*

Necessity and universal force

- Necessity modals have **universal** force.
- $$\textit{must } p \quad \rightsquigarrow \quad \forall w' \, [w' \text{ is relevant } \rightarrow p \text{ is true in } w']$$
- Compare:
  - *Every student is absent.*
  - *Emma must be absent.*

Necessity and universal force

- Necessity modals have **universal** force.
- $$\textit{must } p \quad \rightsquigarrow \quad \forall w' \, [w' \text{ is relevant } \rightarrow p \text{ is true in } w']$$
- Compare:
  - *Every student is absent.*
  - *Emma must be absent.*
- The first quantifies over individuals.

Necessity and universal force

- Necessity modals have **universal** force.
- $$\textit{must } p \quad \rightsquigarrow \quad \forall w' \, [w' \text{ is relevant } \rightarrow p \text{ is true in } w']$$
- Compare:
  - *Every student is absent.*
  - *Emma must be absent.*
- The first quantifies over individuals.
- The second quantifies over worlds.

Necessity and universal force

- Necessity modals have **universal** force.
- $$\textit{must } p \quad \rightsquigarrow \quad \forall w' \, [w' \text{ is relevant } \rightarrow p \text{ is true in } w']$$
- Compare:
  - *Every student is absent.*
  - *Emma must be absent.*
- The first quantifies over individuals.
- The second quantifies over worlds.

Accessibility and restriction

- Modals do not quantify over all logically imaginable worlds.

Accessibility and restriction

- Modals do not quantify over all logically imaginable worlds.
- They quantify over the **relevant** worlds.

Accessibility and restriction

- Modals do not quantify over all logically imaginable worlds.
- They quantify over the **relevant** worlds.
- Those relevant worlds are determined by the conversational background:
    - what is known,

Accessibility and restriction

- Modals do not quantify over all logically imaginable worlds.
- They quantify over the **relevant** worlds.
- Those relevant worlds are determined by the conversational background:
    - what is known,
    - what the rules say,

Accessibility and restriction

- Modals do not quantify over all logically imaginable worlds.
- They quantify over the **relevant** worlds.
- Those relevant worlds are determined by the conversational background:
  - what is known,
  - what the rules say,
  - what the circumstances allow,

Accessibility and restriction

- Modals do not quantify over all logically imaginable worlds.
- They quantify over the **relevant** worlds.
- Those relevant worlds are determined by the conversational background:
    - what is known,
    - what the rules say,
    - what the circumstances allow,
    - what the goals require,

Accessibility and restriction

- Modals do not quantify over all logically imaginable worlds.
- They quantify over the **relevant** worlds.
- Those relevant worlds are determined by the conversational background:
  - what is known,
  - what the rules say,
  - what the circumstances allow,
  - what the goals require,
  - and so on.

Accessibility and restriction

- Modals do not quantify over all logically imaginable worlds.
- They quantify over the **relevant** worlds.
- Those relevant worlds are determined by the conversational background:
    - what is known,
    - what the rules say,
    - what the circumstances allow,
    - what the goals require,
    - and so on.
- So modal interpretation always involves both:
    - **force**, and

Accessibility and restriction

- Those relevant worlds are determined by the conversational background:
    - what is known,
    - what the rules say,
    - what the circumstances allow,
    - what the goals require,
    - and so on.
- So modal interpretation always involves both:
    - **force**, and
    - **restriction**.

Kratzer

Kratzer's picture

- Kratzer's big idea is that modal meaning is not a matter of lexical ambiguity between many different modals.

Kratzer's picture

- Kratzer's big idea is that modal meaning is not a matter of lexical ambiguity between many different modals.
- Instead, modal interpretation is built from interacting parameters.

Kratzer's picture

- Kratzer's big idea is that modal meaning is not a matter of lexical ambiguity between many different modals.
- Instead, modal interpretation is built from interacting parameters.
- In the familiar framework:
    - the **modal base** supplies a set of accessible worlds,

Kratzer's picture

- Kratzer's big idea is that modal meaning is not a matter of lexical ambiguity between many different modals.
- Instead, modal interpretation is built from interacting parameters.
- In the familiar framework:
  - the **modal base** supplies a set of accessible worlds,
  - the **ordering source** ranks those worlds by rules, goals, normality, and so on.

Kratzer's picture

Force and flavour in familiar modal systems

- In the familiar Indo-European pattern, lexical modal auxiliaries typically encode **force**.

Force and flavour in familiar modal systems

- In the familiar Indo-European pattern, lexical modal auxiliaries typically encode **force**.
- So a lexical contrast like *must* vs. *may* is a contrast in quantificational strength.

Force and flavour in familiar modal systems

- In the familiar Indo-European pattern, lexical modal auxiliaries typically encode **force**.
- So a lexical contrast like *must* vs. *may* is a contrast in quantificational strength.
- By contrast, **flavour** is often left underspecified by the lexical item itself and supplied by context.

Force and flavour in familiar modal systems

- In the familiar Indo-European pattern, lexical modal auxiliaries typically encode **force**.
- So a lexical contrast like *must* vs. *may* is a contrast in quantificational strength.
- By contrast, **flavour** is often left underspecified by the lexical item itself and supplied by context.
- That is why the same modal can often receive epistemic, deontic, or other readings.

Force and flavour in familiar modal systems

- In the familiar Indo-European pattern, lexical modal auxiliaries typically encode **force**.
- So a lexical contrast like *must* vs. *may* is a contrast in quantificational strength.
- By contrast, **flavour** is often left underspecified by the lexical item itself and supplied by context.
- That is why the same modal can often receive epistemic, deontic, or other readings.

Italian

- The lexical modal distinguishes force:
  - *deve essere nell' ufficio*
    must+3SG+PRES+IND be in.the office
    'He must be in the office.'

Italian

- The lexical modal distinguishes force:
  - *deve essere nell' ufficio*
    must+3SG+PRES+IND be in.the office
    'He must be in the office.'
  - *può essere nell' ufficio*
    may+3SG+PRES+IND be in.the office
    'He may be in the office.'

Italian

- The lexical modal distinguishes force:
  - *deve essere nell' ufficio*
    must+3SG+PRES+IND be in.the office
    'He must be in the office.'
  - *può essere nell' ufficio*
    may+3SG+PRES+IND be in.the office
    'He may be in the office.'
- But either form can receive different flavours in context.

Italian

- The lexical modal distinguishes force:
  - *deve essere nell' ufficio*
    must+3SG+PRES+IND be in.the office
    'He must be in the office.'
  - *può essere nell' ufficio*
    may+3SG+PRES+IND be in.the office
    'He may be in the office.'
- But either form can receive different flavours in context.

St’at’imcets

- St’at’imcets reverses this pattern.

St'at'imcets

- St'at'imcets reverses this pattern.
- In this system:
    - lexical items encode **flavour**,

St’at’imcets

- St’at’imcets reverses this pattern.
- In this system:
  - lexical items encode **flavour**,
  - while **force** is supplied by context.

St'at'imcets

- St'at'imcets reverses this pattern.
- In this system:
  - lexical items encode **flavour**,
  - while **force** is supplied by context.
- So the division of labour between lexical meaning and context can vary cross-linguistically.

St’at’imcets

- St’at’imcets reverses this pattern.
- In this system:
  - lexical items encode **flavour**,
  - while **force** is supplied by context.
- So the division of labour between lexical meaning and context can vary cross-linguistically.

	Force	**Flavour**
Indo-European pattern	lexical	contextual
St’at’imcets	contextual	lexical

St'at'imcets and lexical flavour

- Epistemic item:

  wa7=k'a s-t'al l=ti=tsitcw-s=a s=Philomena
  be=EPIS STAT-stop in=DET=house-3SG.POSS=EXIS NOM=Philomena
  'Philomena must / might be in her house.'

St'at'imcets and lexical flavour

- Epistemic item:

  wa7=k'a s-t'al l=ti=tsitcw-s=a s=Philomena
  be=EPIS STAT-stop in=DET=house-3SG.POSS=EXIS NOM=Philomena
  'Philomena must / might be in her house.'

- Deontic item:

  lan=lhkacw=ka ats'x-en ti=kwtamts-sw=a
  already=2SG.SUBJ=DEON see-DIR DET=husband-2SG.POSS=EXIS
  'You must / can / may see your husband now.'

St'at'imcets and lexical flavour

- Epistemic item:

  wa7=k'a s-t'al l=ti=tsitcw-s=a s=Philomena
  be=EPIS STAT-stop in=DET=house-3SG.POSS=EXIS NOM=Philomena
  'Philomena must / might be in her house.'

- Deontic item:

  lan=lhkacw=ka ats'x-en ti=kwtamts-sw=a
  already=2SG.SUBJ=DEON see-DIR DET=husband-2SG.POSS=EXIS
  'You must / can / may see your husband now.'

- The first is only epistemic.

St'at'imcets and lexical flavour

- Epistemic item:

  wa7=k'a s-t'al l=ti=tsitcw-s=a s=Philomena
  be=EPIS STAT-stop in=DET=house-3SG.POSS=EXIS NOM=Philomena
  'Philomena must / might be in her house.'

- Deontic item:

  lan=lhkacw=ka ats'x-en ti=kwtamts-sw=a
  already=2SG.SUBJ=DEON see-DIR DET=husband-2SG.POSS=EXIS
  'You must / can / may see your husband now.'

- The first is only epistemic.
- The second is only deontic.

St'at'imcets and lexical flavour

- Epistemic item:

  wa7=k'a s-t'al l=ti=tsitcw-s=a s=Philomena
  be=EPIS STAT-stop in=DET=house-3SG.POSS=EXIS NOM=Philomena
  'Philomena must / might be in her house.'

- Deontic item:

  lan=lhkacw=ka ats'x-en ti=kwtamts-sw=a
  already=2SG.SUBJ=DEON see-DIR DET=husband-2SG.POSS=EXIS
  'You must / can / may see your husband now.'

- The first is only epistemic.
- The second is only deontic.
- But each can vary in force depending on context.

St'at'imcets and lexical flavour

- Epistemic item:

  wa7=k'a s-t'al l=ti=tsitcw-s=a s=Philomena
  be=EPIS STAT-stop in=DET=house-3SG.POSS=EXIS NOM=Philomena
  'Philomena must / might be in her house.'
